

Spectra Precision Central

NEW
for 2015

The Parts

There are four main components to Central:

Web Portal

The web portal provides an easy way to edit, manage, and use your Central accounts and data. It can be accessed with any browser from your office computer, tablet, or smart phone.

Smart Phone Apps

Survey Pro Central for Android and Survey Pro Central for iOS provide access with dedicated smart phone and tablet apps. These apps provide data access and a range of functionality to help you manage your data, and therefore your workday, better.

Field Software Integration

Survey Pro is fully integrated into Spectra Precision Central. Files are uploaded as they are created. New data is sent up to Central based on user preferences. So now, not only do Spectra Precision ultra-rugged data collectors and dedicated field software protect your data, so does Central, backing it up on a remote server.

Spectra Precision Central Sync

Central Sync is a tool that runs as a service on your computer and synchronizes data that is placed in the Central folders. This makes file management and synchronizing data with Central very easy.

Simply Connected

Go to SpectraPrecisionCentral.com to sign up.

Spectra Precision Central provides a hub for your complete survey team to connect and exchange information from anywhere there is a data connection. A cloud service is nothing more than internet accessible data storage. It's how you access and use the data that is really the important part. Spectra Precision Central is designed for professionals who make their living outside, doing measurements, and building the world.

How it Works

Spectra Precision Central Sync

Central Sync is a service that runs on your PC. It is always available in your taskbar tray.

If you want a file to be available on Spectra Precision Central, simply use your normal Windows file explorer to copy or move the file into the Central folder on your computer. Central Sync then detects a new file and will automatically synchronize it with the Central cloud server. If you update a file by opening and editing it while it is in your Central folder on your computer, Central Sync will also detect that and automatically update the file on the Central cloud server. It's really that easy.

If a field crew updates a file in Survey Pro, that data will also be synchronized up to the Central cloud server. When that happens, the change is detected and the data will be synchronized back down to your office computer, or any other computer that is setup to use that folder. You don't have to do anything: no button pressing or routines to run to make things synchronize. It just happens based on the settings you configure in Spectra Precision Central Sync and Web portal.

Spectra Precision Central

Survey Pro

Survey Pro can be configured to connect to your Spectra Precision Central account. Only Survey Pro installations that have a current warranty can actively update files from the Central server. Once connected, there is a special folder just for

that data collector where all the data files will be stored. The crew in the field just needs to work normally, and the data will be available based on your settings.

Synchronization can be configured to automatically synchronize using any data connection available, including cellular, synchronize automatically only when connected to WiFi, or only synchronize when told to do so.

Data is synchronized up to the Central server and then distributed to all other connected devices and computers as required. Your data is then available for viewing or use by other members of your team. And, importantly, that data is also now backed up to a remote site guaranteeing data security.

The data connection works both ways. If a new file is loaded onto your device folder on the Central server, then that data will be synchronized to your data collector in the field (based on your settings). You can get updated information in real time so you always stay ahead of the job.

Spectra Precision Central Web Portal

The web portal provides access to the Central system from any device that can run a modern web browser. The web portal also provides all the account management tools required to setup your own organization.

You can create accounts for your employees, register data collectors, and organize your folder structure.

Each Organization with Central has an administrator that sets up all the accounts. You can have one account for each crewmember you have or you can restrict access to just your crew chiefs. It's up to you to decide what is best for you. The important thing is that once you start using Central, you can create and remove accounts as you need to without the need for phone calls or support tickets. You do it yourself.

Survey Pro Central for Android and iOS

Survey Pro Central is a smart phone app that connects to your Spectra Precision Central server. You can see an activity list showing you all recent data synchronization. You can browse to your data collector's folder to check data, see a survey map of the job, or see your survey data overlaid on a Google map.

You can also use the app to upload and download data. For example, if you created a cut sheet report in Survey Pro, but your data collector is stowed in the back with the instrument, you can quickly show the contractor the cut sheet data using your smart phone. You can even email the document directly to your customer if you want to.

The key is productivity. It's your data. You should be able to easily access that data whenever you want to. Survey Pro Central for Android and iOS gives you that ability.
